

## Purpose: How to configure a zero charge billing plan to check the two-way PMS system

Starting with version 8.1, you can now have the two-way PMS system queried when the billing plan is set to 0.00.

With the plan set to 0.00, you must also enable the Free for PMS User option. When the subscriber selects this plan, they will be prompted to enter their last name and room number and these will be sent to the PMS for verification.
