

How to enable the Partner Image

The partner image is used for the connection status screen (the screen that tells subscribers they have been recognized by the network). You can specify any image you want to display by entering the file name of the new image.

You will need to FTP your additional image to the /flash/ directory of the NSE. See How To FTP to the Gateway guide. Login to the Subscriber Interface/Login UI. Enter the image file name that previously uploaded and reboot the NSE.

Image File Name	<input type="text" value="image.gif"/>	
Page Background Color	<input type="text" value="white"/>	View Color Grid
Table Background Color	<input type="text" value="#E0E0C2"/>	
Page Title Font	<input type="text" value="Verdana"/>	
Line Item Font	<input type="text" value="Verdana"/>	
Partner Image	<input checked="" type="checkbox"/> Enable	
Partner Image File Name	<input type="text" value="myimage.gif"/>	

NOTE: You must reboot for **Image File Name** or **Partner Image File Name** settings changes to take effect.

Reboot after changes are saved? Yes
