

## How to enable iNAT

Go to the Configuration Menu and select /iNAT. Click enable and make sure that PPTP, PPTP CALL ID and IPSEC are also checked.

Add start and stop IP addresses of the desired public pool and hit submit.

**NOTE:** Multiple iNAT pools can be added, however if they are not part of the same subnet as the NSE, then these additional pools will need to be defined as public subnets in the Configuration/Subnets screen.

### iNAT

**iNAT**  Enable  
PPTP  Enable PPTP CALL ID  Enable (Requires reboot)  
IPSEC  Enable  
Reboot after changes are saved?  Yes

Submit

### iNAT Address Pool

Please enter an IP address/range:  
Note: Up to 50 iNAT IP addresses/ranges can be entered.
