

Purpose: To Enable the Group Account feature

Group Accounts allow multiple logins with the same username and password. Beginning with version 8.5, you may create the group account and assign an Account Valid time, which will delete the group account when it expires and log off users logged into the group account.

- 1) Navigate to Subscriber Administration - >Add
- 2) Select Group Account
- 3) Enter a Username and Password – minimum requirement
- 4) Enable Account Valid until, Expiration time, Bandwidth management, Class name, SMTP Redirection and Maximum Users per Group (optional)
- 5) Select a QoS policy if licensed for the gateway and globally configured
- 6) Click Add to create

Add a Subscriber Profile to the Database

Subscriber Device Group Account

Account valid until: 2017 MAR 1 12:00 (24-hour clock)
