

Purpose: Explanation of the Memory Utilization information.

### System Memory Usage Information

status	bytes	blocks	avg block	max block
current				
free	27798796	24	1158283	27583436
alloc	77039908	20646	3731	-
internal	1040	5	208	-
cumulative				
alloc	30347460528	13080566	2320	-
peak				
alloc	77814924	-	-	-

Current free is the memory available, as long as this is above 15Mb all is fine.

Current alloc is the memory being used by subscribers when the figures were pulled.

Current internal is used by the Nomadix for services like AAA processing and any of the tables that are in memory like Subscriber Administration -> Current table.

Cumulative alloc is the total amount of memory allocated since the last boot and will steadily increase.

Peak alloc is the highest amount of memory allocated at one time since the last boot.
