Dorsett Hotel, Shepherds Bush, is the first in a string of UK developments from Global Operators Dorsett Hospitality, based in Hong Kong. Dorsett Shepherds Bush is the renovation of a Grade II-listed building with eight stories and 317 guest bedrooms, offering its business and leisure guests stylish and comfortable accommodations.

Dorsett Shepherds Bush’s primary objective was to provide its guests with a large-scale, resilient network that was capable of supporting the high numbers of guests and visitors that want and need to connect at all hours of the day and night. The necessary systems needed to be in place and fully operational by the June 2014 hotel opening date.

“The flexibility Nomadix was able to offer us was a key component to our securing the project. We know their equipment very well and we have the confidence to specify new technologies knowing that if Nomadix says it will work, it will work.”

CASE STUDY
Nomadix Internet Access Gateway

Micron Communications deployed a Nomadix AG 5800 access gateway and Ruckus access points at Dorsett Shepherds Bush. The hotel also required certified integration between the wireless network and Micros Fidelio PMS software, which would grant guest access to the network using simply their surname and room number, rather than the hotel having to issue various access codes.

The Dorsett Hotel, Shepherds Bush, opened successfully in June 2014 with all the necessary Internet access and network strength to keep the hotel's online traffic running at optimum levels, thanks in part to Nomadix’s reliability and hassle-free services. The Nomadix AG 5800 provides secure and reliable service to the hotel guests, so that all the customer feedback remains positive.

“The UK is not renowned for the quality of its Internet access, and we were dealing with clients who would be used to super-fast connectivity at their other sites across the world. Not only was it key for our solution to not disappoint, but we like to exceed expectations wherever possible.”
